EDUCATION

Balqa' Applied University - Salt, Jordan

Bachelor of Cybersecurity | 2.8 GPA

Expected Graduation: Sep 2022

SKILLS

Languages HTML · CSS · JavaScript · React – Angular – Bootstrap – problem solving · Python · SQL ·

Software AWS · NodeJS · Express.js · MongoDB · Sequelize · Git ·

EXPERIENCE

Advanced Software Development in Full-Stack

June 2022

- Gained proficiency in writing efficient and maintainable JavaScript code, both on the client and server side
- Learned how to build APIs and backend services using Node.js
- Worked with Express.js to set up server-side logic, handle routing, and manage middleware
- Integrated databases like MongoDB and MySQL for data storage and manipulation.
- Gained expertise in building dynamic and interactive UIs using React.js
- Learned state management using Redux and React Context API.

Full Stack Developer

The Larn Book Gate:

Mar 2023 – Oct 2023

Amman, Jordan

- I work extensively with **React.js**, utilizing its component-based architecture to build dynamic and responsive UIs
- I use **Node.js** and **Express.js** to create and manage RESTful APIs. I implement server-side logic, and handle routing.
- I design and manage relational and NoSQL databases, optimizing queries and ensuring data integrity and scalability.
- Enhanced application performance through optimization techniques and code refactoring, resulting in faster loading

Frontend Developer

[Glyphsmarketing](#)

Oct 2023 - May 2024(REMOTELY)

USA – GEORGIA

- I focus on building visually appealing, user-friendly, and responsive web applications that deliver experience for users
- My role involves transforming design prototypes into functional code while ensuring that websites are optimized
- Implemented new features and improved existing ones by optimizing the frontend codebase

AI Prompt Engineer

[Menadevs](#)

Jul 2024 - present

Amman, Jordan

- As an AI Prompt Engineer at Menadevs, I design, develop, and test complex prompts that optimize AI models.
- My role extends beyond prompt creation to include coding for AI-driven tasks and refining AI-generated code.
- Successfully refactored AI-generated code to improve its performance and readability leading to higher-quality.
- Contributed to the continuous improvement of AI models by providing insights and feedback that led to optimization

PROJECTS

The learn Book Gate | - thelearnbook.com

The Scientific Book Portal constitutes a platform for databases that includes various sources of knowledge under its umbrella, as it includes thousands of works of scientific books, theses, Arab journals, and international conferences.

All Arab USA | - arab-georgia.com

Arab Georgia is a community project that helps Arabs living in or moving to Georgia. The project provides a forum for Arab Georgians to connect with each other and share resources, experiences, and advice.

JQurney | github.com/School-trip-app

we have built a website for schools that provides Organizing fun, useful and safe school trips takes a lot of time and effort and requires special study for the trip

MenaDevs AI | menadevs.ai

In this project, you will create prompts to train an artificially intelligent (AI) assistant. This AI assistant understands text commands and questions and can write text responses. Its goal is to follow any given command in a way that is as helpful as possible.
